

2.3.1. Student-centric methods, such as experiential learning, participative learning, and problem-solving methodologies are used for enhancing learning experiences using ICT tools.

Experiential learning at institute is achieved mainly via laboratory-based experiments in all the programs. Diploma students undergo mandatory **industrial training** and **field visits**. Graduate students are exposed to **Project Work, Practice Schools** and also routinely perform industrial visits and undergo **workshops trainings**. At institutional level a collaborative initiative is taken through **Skill Improvement Activities (SIGs)** to enhance practical engagement of the students. The post-graduate students are promoted to undertake industry-based projects that greatly aid the experiential learning. Furthermore, visits to sophisticated analytical facility in the region for project work also helps the same.

Participative learning is achieved via student **presentations; group discussions-based tasks, mock interview sessions**, and student publications and presentations in various competitions. The institution uses Whatsapp groups and Google Classroom Platforms for individual classes. Such as e-learning environment enables and encourages collaboration and teamwork amongst students and teachers. Students interact with their teachers in more specific, direct, and personalized manner using the **flipped classroom technique**. This makes student learning more participatory and increases students engagements

Problem-solving methodologies are provided in routine practical based courses. This is refined during the final year of graduate courses via **research or review projects**. The PG students undertake research project of their interest in the final year.

2.3.1 Student Centric Methods

The student-centric method is an educational approach that places students at the centre of the learning process, emphasizing active participation, engagement, and personalized learning experiences. Teacher learning is a planned interaction between the teacher and a student that results in the behavioural modification. The teaching methods at Indore Institute of Pharmacy are adopted with the vision to encourage students to engage in discussions, problem-solving, group work, and hands-on activities. This methods tailor content, pace, and methods to meet the individual needs, interests, and learning styles of students. It develops skills in analysis, evaluation, and application by presenting real-world challenges and encouraging inquiry-based learning and empowers students to take ownership of their education through goal-setting, self-assessment, and reflection. In the teacher learning process, teachers are considered as the prime motivator and adopt various student centric teaching learning methods to enrich the learning process.

Student centric methods may be Experiential, Participative and Problem-solving methodologies.

Experiential Learning is an instructional approach that emphasizes learning through direct experience and active engagement. They are well planned, supervised and assessed programmes which can stimulate academic inquiry by promoting interdisciplinary learning, career development, leadership, other professional and intellectual skills.

Various methods of experiential and participatory learning are adopted to ensure that students are active participants rather than remaining passive listeners in the teaching-learning process.

The experiential and participatory learning activities adopted by the institute that develop an application based outlook of students are:

- Industrial Training
- Skill Improvement Activities (SIGs)
- Lab sessions
- Industrial Visits

Principal
Indore Institute of Pharmacy,
INDORE (M.P.)

- Educational Tour
- Practice Schools (Field work)
- Workshops

Experiential Learning during Practical hours: The students' learning process in the laboratories is monitored on a daily basis. During laboratory hours, the students are monitored by the faculty for technical skill learning. The experimental work of the students is documented in their practical records and evaluated by the faculty on a regular basis.

Skill Improvement Activities: Skill improvement activities are designed to enhance individuals' personal, professional, and technical competencies, enabling them to perform effectively and grow in their respective fields. These activities can be tailored to specific goals and skill areas in the form of hands-on analytical training, computer skills etc.

Industrial Training: The primary goal such as training for students is to provide them transitional work experience, from academics to professional career through field experiences. The main objective of internships in industry is to make them know about their career choices to choose the field for the future.

Educational Tours: They are an integral part of holistic education. They provide students with opportunities to explore learning beyond the confines of the classroom, offering experiential and practical insights that enhance academic understanding. It allows students to experience concepts and topics in a real-world setting.

Industrial Visits: They are a powerful tool in academics, bridging the gap between theoretical knowledge and practical application. These visits are particularly valuable for students in fields like engineering, management, science, and technology. This visits provide opportunity to students to learn real time problems and their solutions, it also enhances their communication by meeting leading personalities of their field. It also introduces students to modern tools, technologies, and practices in industries.

Participative Learning

University gives high importance to the holistic development of students beyond the classroom through co-curricular, extra-curricular, and field-based activities. To pursue the interest in their area of specialization, students' clubs & committees are functional. Some of

Principal
Indore Institute of Pharmacy,
INDORE (M.P.)

the committees are the Cultural Committee, Sports Committee, Alumni Committee, Placement Committee, Industry Interaction Committee, etc.

Inter-Institutional sports meets are organized annually. Students participate in sports competitions to exhibit talent in a variety of games to foster the spirit of togetherness and leadership. Students are encouraged to participate in various technical competitions and sports competitions etc.

Problem Solving Methodologies:

Involvement of students and faculty in solving the problems with research orientation on advanced topics. We demonstrate and give solutions to technical difficulties in the laboratory, handling the advanced instruments/equipment.

Research Projects:

It is mandatory for M.Pharm. students to undertake the research project for completion of the program.

- It is obligatory for B. Pharm. final students to carry out research projects.
- The institute allocates project guides to each student.
- Students, with the consent of the guide, select the topic of his project which is mainly laboratory oriented.
- During the execution of the project, students need to decide their objective depending on the literature review.
- The students further plan, execute and submit their findings in the form of a project report within the stipulated period of time.
- The M. Pharm. students are evaluated for their research work by the University appointed examiner.
- After submission of the summary and the thesis, the external examiner panel is selected by the University for the Evaluation process

Subject: Industrial Training.

Dear Sir,
Greetings for the day!!

I feel Proud to introduce Indore Institute of Pharmacy. We endeavour to spread technical and professional pharmacy education in the state of Madhya Pradesh. The campus hosts well equipped Pharmacy College, Engineering College, and a MBA College with all modern facilities and infrastructure at Indore (www.indoreinstitute.com).

Ms. Chetna Choudhary of B.Pharm 7th semester is a Gonafile student of Indore Institute of Pharmacy, Indore.

We shall be highly obliged if you can accommodate our student for training program:me starting from 01/08/2024 to 15/08/2024

Thanking you.
Sincerely Yours

PRACTICAL BASED LEARNING (LABORATORY EXPERIMENTS)

Indore Institute of Pharmacy

Affiliated to - B.P.U. (Bhopal) (Approved by - AICTE (New Delhi) & PCI (New Delhi)
Register - Under UGC Act

COURSE CONTENTS

BP107P. HUMAN ANATOMY AND PHYSIOLOGY (Practical)

4 Hours/week

Practical physiology is complimentary to the theoretical discussions in physiology. Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings. This is helpful for developing an insight on the subject.

1. Study of compound microscope.
2. Microscopic study of epithelial and connective tissue
3. Microscopic study of muscular and nervous tissue
4. Identification of axial bones
5. Identification of appendicular bones
6. Introduction to hemocytometry.
7. Enumeration of white blood cell (WBC) count
8. Enumeration of total red blood corpuscles (RBC) count
9. Determination of bleeding time
10. Determination of clotting time
11. Estimation of hemoglobin content
12. Determination of blood group.
13. Determination of erythrocyte sedimentation rate (ESR).
14. Determination of heart rate and pulse rate.
15. Recording of blood pressure.

COURSE CONTENTS

BP306P, PHYSICAL PHARMACEUTICS - I (Practical) 4 Hrs/week

1. Determination the solubility of drug at room temperature
2. Determination of pKa value by Half Neutralization/ Henderson Hasselbalch equation
3. Determination of Partition co-efficient of benzoic acid in benzene and water
4. Determination of Partition co-efficient of Iodine in CCl₄ and water
5. Determination of % composition of NaCl in a solution using phenol-water system by CST method
6. Determination of surface tension of given liquids by drop count and drop weight method
7. Determination of HLB number of a surfactant by saponification method
8. Determination of Freundlich and Langmuir constants using activated char coal
9. Determination of critical micellar concentration of surfactants
10. Determination of stability constant and donor acceptor ratio of PABA-Caffeine complex by solubility method
11. Determination of stability constant and donor acceptor ratio of Cupric-Glycine complex by pH titration method

BP 506 P. Industrial Pharmacy I (Practical)

4 Hours/week

1. Preformulation studies on paracetamol/aspirin/or any other drug
2. Preparation and evaluation of Paracetamol tablets
3. Preparation and evaluation of Aspirin tablets
4. Coating of tablets- film coating of tablets/granules
5. Preparation and evaluation of Tetracycline capsules
6. Preparation of Calcium Gluconate injection
7. Preparation of Ascorbic Acid injection
8. Quality control test of (as per IP) marketed tablets and capsules
9. Preparation of Eye drops/ and Eye ointments
10. Preparation of Creams (cold / vanishing cream)
11. Evaluation of Glass containers (as per IP)

BP705P. INSTRUMENTAL METHODS OF ANALYSIS (Practical)

4 Hours/Week

- 2 Determination of absorption maxima and effect of solvent on absorption maxima for organic compounds
- 3 Estimation of dextrose by colorimetry
- 4 Estimation of sulfanilamide by colorimetry
- 5 Simultaneous estimation of ibuprofen and paracetamol by UV spectroscopy
- 6 Assay of paracetamol by UV-Spectrophotometry
- 7 Estimation of quinine sulfate by fluorimetry
- 8 Study of quenching of fluorescence
- 9 Determination of sodium by flame photometry
- 10 Determination of potassium by flame photometry
- 11 Determination of chlorides and sulphates by nephelometric turbidometry
- 12 Separation of amino acids by paper chromatography
- 13 Separation of sugars by thin layer chromatography
- 14 Separation of plant pigments by column chromatography
- 15 Demonstration experiment on HPLC
- 16 Demonstration experiment on Gas Chromatography

Industrial Visit Report

A complete report on Industrial training programme held at LUPIN Limited in Pithampur. The training was organized by Indore Institute of Pharmacy for all B.Pharm and M.Pharm students of the institute to order to get practical knowledge and exposure related to plant layout, production, and packaging. Lupin's Pithampur Unit-3 is involved in the manufacture of Metered Dose Inhalers (MDIs), Dry Powder Inhalers (DPIs) and Topical Formulations for the regulated markets.

ACKNOWLEDGEMENT

Indore Institute of Pharmacy has organised an Industrial visit for all the B.Pharm and M.Pharm students of the institute. The training was organized on 22nd Dec 2023 at Ipca Laboratories Limited, Pithampur.

The visit was organised by institute in coordination with our principal Dr. Nimita Manocha and placement coordinator Mr. Darshan Jamindar.

We are very thankful to respected principal mam and sir for providing us with this wonderful opportunity in order to get the practical exposure for the reputed pharmaceutical industry.

DETAILS OF VISIT

An Industrial Visit was organised by Indore Institute of Pharmacy for all the B.Pharm and M.Pharm students of the institute. The training was organized on 22nd Dec 2023 at Ipca Laboratories Limited, Pithampur. All the students are instructed to gather in the college by sharp 9 am in formal attire. As instructed students have gathered in premises till 9:30 am and then we went for the industry location by institute bus. We reached industry at about 11:00 am where we have security check at the gate and given visitors pass to all the faculty and students.

All the mobiles and amenities are kept at the outside premises of the industry.

Ipca Ltd. Pithampur

As we entered in the industry we are accompanied by two HR personnels. Students are divided into two groups' boys and girls respectively. The boys are taken to the hair care product department and girls to the API manufacturing unit. Students were taken to all the departments including raw material, production and packaging.

Students have thoroughly understood the following:

- Plant Layout
- Floor design, wall coating, entry, exit points, doors etc.
- Gowning procedure
- Cleaning procedures etc.

COMPANY PROFILE

Ipca: A consumer-led global pharmaceutical company, creating healthy doses of life since 1949. When you operate in an industry like pharmaceuticals, your work goes way beyond creating ‘products for customers’. It is different from any other domain – there lies a higher sense of responsibility and a need for utmost integrity in everything you do. As you serve millions of lives, high quality standards become a pre-requisite, and safety of your people and consumers always comes first. All this, while ensuring that each life you touch is treated with respect and dignity. This is how Ipca works. For more than 60 years, Ipca has been a crucial healthcare partner in over 120 countries across the 6 continents. We are a fully-integrated pharmaceutical company that manufactures over 350 formulations and 80 APIs for various therapeutic segments. Today, Ipca is one of the world’s largest manufacturers and suppliers of over a dozen APIs. These are produced from scratch at fully-automated manufacturing facilities, approved by the world’s most discerning drug regulatory authorities like UK-MHRA, EDQM-Europe, and WHO-Geneva, among others.

Taking the industry forward

- One of the largest suppliers of these APIs worldwide with manufacturing leadership in over 12 APIs globally
- 15 APIs & 11 Formulations manufacturing facility across the globe
- Leading brands in Pain, Rheumatology, Antimalarials and Hair care therapy in India
- 5 formulations rank amongst the top 300 brands of Indian Pharmaceutical Market as per IQVIA October 2023

GROUP OBSERVATIONS/ DISCUSSION

After the visit there was a session conducted by, HR head at Ipca Laboratories Ltd. In the discussion he told about the history how Ipca started, the milestone company have achieved in a very short span. The story behind Ipca success and the headquarters of the company around the globe. He also told about the career opportunities and options student can explore to work with the firm.

There was a quick question-answer session regarding the career opportunities, interviews, technical round and many more questions are asked by students out of the curiosity to prevail a good career in pharmaceutical industry.

CONCLUSION

The wonderful opportunity provided by the institute to students to explore the practical side of the pharmaceutical industry. The visit was full of informative sessions, a tour to the various departments, interaction with the team and many more. The visit ends with the refreshment to the students and faculties.

COMPANY PROFILE

Lupin's manufacturing philosophy is simple yet strategic — we consider the needs and priorities of our key stakeholders to provide maximum impact. We are focused on innovation, and the development of safe, effective life-saving drugs for our patients. We encourage lean manufacturing and work towards eliminating inefficiencies. We facilitate teamwork and problem solving, attracting and retaining a diverse workforce. Our manufacturing footprint — 15 world-class facilities spread across India, the U.S., Brazil and Mexico — are designed to deliver the promise of caring that Lupin has come to symbolise – that no patient shall be denied access to high-quality, affordable medicines. We hold ourselves to the highest ethical standards, investing in technology, automation and modern systems to minimise human error, maintain quality and enhance profitability. The focus on manufacturing excellence allows us to maintain our pre-eminence as a leader in formulations and APIs. It has helped us achieve best-in-class standards in both manufacturing and quality operations.

Report on training program “Manufacturing & Quality practices in pharmaceutical industry” at Ahemdabad

Indore Institute of Pharmacy, Organized Training Program on 15/10/2023. Manufacturing & Quality Practices in Pharmaceutical Industry’ was conducted for students.

Venue: NIPER AHEMADABAD

Date & Time: 15.10.2023, 09:00 AM onwards

The program started with opening ceremony, under the supervision of Dr. Rakesh Tekade and training on “In silico training program” by DR. Santosh Kumar Behra. Then students were divided in 4 different batches, each batch containing 15 students. After making the batches and assigning of the coordinators for different batches, students moved to the R&D laboratory, and attended different session of different instruments. The training program was conducted on following instruments:

S No.	Instrument Training Program	Volunteer
1	Zeta Potential	By Nupur Vasudev
2	UV Spectroscopy	Shubham Mule
3	Rota Evaporator	Tanisha Gupta
4	Pipette Handling	Vikas Maheshwal
5	HPLC	Vishal pardhi
6	NMR	Mainak Mukherjee
7	GC	Reena Kumari
8	LCMS	Ms. Rajeshwari Rathod
9	SEM	Janapati Srinu
10	Hot Melt Extrusion	Dhwani Rana
11	Tableting	Amit Sharma
12	Spray dryer	Yogesh Kumar
13	Master sizer	Jyotsna Vitore
14	Hardness tester	Tejas Agnihotri
15	Vaccum Dryer	Shivam Otavi

This is to inform all the B.Pharm, M.Pharm and D.Pharm student that kindly gather at computer lab to fill the online survey form on the online link shared.

For B.Pharm 1st and 2nd year on 22nd April, 2024

S.No	Course / Year	Section	Time
1.	B.Pharm/ 1 st Year	SEC-A	12:00-1:00PM
		SEC-B	1:00-2:00PM
2.	B.Pharm/ 2 nd Year	SEC-A	2:00-3:00PM
		SEC-B	3:00-4:00PM

For B.Pharm 3rd and 4th year on 23rd April, 2024

S.No	Course / Year	Section	Time
1.	B.Pharm/ 3 rd Year	SEC-A	12:00-1:00PM
		SEC-B	1:00-2:00PM
2.	B.Pharm/ 4 th Year	SEC-A	2:00-3:00PM
		SEC-B	3:00-4:00PM

For M.Pharm and D.Pharm students on 24th April, 2024

S.No	Course / Year	Time
1.	M.Pharm	10:00-11:00AM
2.	D.Pharm	10:00-11:00AM

Unit-II HDT Notes

18. Amla

- Syn: Amalaki, Indian gooseberry
- Source: dried ripe fruits of *Phyllanthus emblica*
- Family: Euphorbiaceae
- GS: India, Srilanka, Myanmar
- Constituents: Hydrolysable tannins: Gallic acid, Ellagic acid, vitamin C, amino acids, phyllembin
- Indication: As a rejuvenative herb, it nourishes body tissues and accelerates the cell regeneration process.
- As a powerful antioxidant, Emblic Myrobalan helps scavenge free radicals linked to premature aging.
- It helps in building the body's immune system and provides resistance against many diseases, especially those of the respiratory tract.

Assignment 2

Nayana Sharma Saini • Jul 8

100 points

Due Jul 15

Unit 1

1. Explain the fundamental of TDDS focusing on principles and methods; discuss the role of PI in designing these system. elaborate on specific technique like magnetically induced drug targeting and ligand mediated targeting

2. Provide insights into challenges and strategies for delivering drugs to specific sites like brain and tumor including barriers and overcoming technique

Unit 2

Describe nanoparticles and liposomes, including their methods of preparation, evaluation parameters, and applications. Provide a detailed explanation of the top-down and bottom-up techniques for nanoparticle preparation.

Describe the types, formulations, and evaluation parameters of liposomes with a special focus on the thin film hydration method. Explain the concepts of active and passive targeting in drug delivery systems.

To Whomsoever It May Concern

This is to certify that Ms. Richa Shukla, is Pharmacy Student from Indore Institute of Pharmacy, Indore underwent practical training in the Program Management & Technology Transfer Department from February 12th, 2024 to March 09th, 2024.

During the training period, she has received training in the Process Validation. We found her sincere and hardworking during her training period with our organization.

We wish her every success in future pursuits of life.

Behnken design.

ABSTRACT:

Objective: This research aims to develop, optimize and characterize the sustained release *in situ* ocular gel containing moxifloxacin hydrochloride. **Material and Method:** Box-Behnken design was applied to optimize the formulation. The independent variables were (X₁) concentration of sodium alginate (%w/v), (X₂) concentration of carbopol 934 (%w/v) and (X₃) concentration of HPMC K100M (%w/v) while the (Y₁) drug release (%) was the dependent variable.

Evaluation: Further the optimized formulation was evaluated for appearance, pH, viscosity, gelling capacity, drug content estimation, sterility testing and spreadability of formulated gel.

Result: The optimized formula of moxifloxacin *in situ* gel containing sodium alginate (1.5 %w/v), Carbopol 934 (1%w/v) and HPMC K100M (0.625%w/v) was found to be clear, pH was found to be in range (6.8-7.4) and showed maximum drug release of 96.45% upto 8 hours. These results concluded that *in situ* gels can be used as an alternative of traditional eye drops.

Introduction

Ocular drug delivery is a challenging task for the pharmaceutical scientists because of the protective mechanism of eyes such as rapid precorneal elimination of drug, tear turnover and poor drug bioavailability.^[1] Conventional drug delivery system such as eye drops shows poor ocular bioavailability (<5%). To overcome these factors, the designing of a novel approach for simple, safe, and effective drug delivery has been investigated.^[2] Over the past decades several novel approaches have been developed among which *in-situ* gels has attained a great attention which were investigated by researchers to enhance retention time, bioavailability and therapeutic efficacy of the topically administered drugs.^[3]

When the polymer chain is cross-linked, either chemically (chemical cross-linking) or non-covalently (physical cross-linking), the polymeric solution transforms into the gel. An additional mechanism known as physiologic stimuli are also responsible for the formulation of *in-situ* gel, these stimuli include those that are triggered by temperature and pH.^[4] Numerous natural and synthetic polymers such as alginate acid, gellan gum, xanthum gum, xyloglucan, pectin, chitosan, poly (DL lactic acid), poly (DL-lactide-co-glycolide), and poly-caprolactone are employed in the formulation and development of *in-situ* gel drug delivery systems.^[5]

The formulation adopted is a sodium alginate solution containing carbopol 934 and HPMC K 100 M (viscosity enhancer) which complexes with the Ca²⁺ ions present the lachrymal fluid. Free calcium ions interact with

Abstract

Objective: This study aimed to develop and optimize a microemulgel formulation for the topical delivery of tretinoin, a BCS class II drug, for the treatment of keratosis pilaris using response surface methodology (RSM). **Method:** The microemulgel was prepared by spontaneous emulsification method using isopropyl myristate (acting as the oil phase and penetration enhancer), Tween 80 (as the surfactant), and propylene glycol (as the co-surfactant) [Smix]. Carbopol 934 was selected as the gelling agent due to its suitability for topical applications. Employing Box-Behnken experimental design, nine microemulgel formulations were prepared and optimized based on three independent variables: isopropyl myristate, Tween 80, and propylene glycol, with entrapment efficiency as the response parameter. The ability of the microemulgels to deliver tretinoin through the skin was evaluated in vitro using Franz diffusion cells. Optimized formulation, F3 containing 26.75% Smix and 6.3% oil phase, which exhibited the highest entrapment of 98.15% tretinoin. **Result:** During the study F3 was the best formulation, containing 1.5 g of Carbopol 934, exhibited the highest drug release of 94.06% in 5 hours, indicating sustained release facilitated by vesicles acting as a release-retarding agent. **Conclusion:** This optimized microemulgel formulation indicate that the studied microemulgel (F3) for enhancing the topical delivery of tretinoin with sustained release characteristics, offering a potential treatment for keratosis pilaris.

ABSTRACT

The aim of the present research work was to formulate the Mouth Dissolving Film, to minimize the current and future problems of engulfing the oral dosage form like tablets, capsules and less patient compliance especially of pediatric and geriatric. Therefore, to overcome the problems like dysphagia, bedridden and comatose patient and to improve the bioavailability of the drug mouth dissolving film can be a better option. The preparation of mouth dissolving film was carried out by simple method that was solvent casting method, the homogeneity and the thickness of the film obtained by this method was good. The film was tested for thickness, surface pH, weight variation, folding endurance, % moisture loss, ex vivo permeation study, tensile strength, % elongation, drug content uniformity, in-vitro dissolution studies and in-vitro disintegration test. The best formulation was F4 as it releases 99.17% of drug in 2 minutes, the drug release of the best formulation (F4) followed zero-order kinetics and the Correlation Coefficient R^2 was 0.993 and ex-vivo permeation study of F4 formulation showed a drug release of 87.62% within 2 minutes. The study reveals that the formulation can be very useful for the treatment of the disease which requires quick-onset of action.

INTRODUCTION

The common pharmaceutical dosage form like tablets, capsule, syrup are maximally used in market to deliver the dose and give therapeutic effect but the geriatric, pediatric and dysphagia patients have choking and swallowing problem so to overcome this problems mouth dissolving oral film are formed. Mouth dissolving oral film is the novel approach to deliver the dose in appropriate manner to enhance activity and making more convenient, they can be manufactured by different types of technologies like: solvent casting method, hot melt extrusion, semisolid casting method, rolling method and solid dispersion extrusion. The major advancement of this system is no requirement of water, painless and can be administered by ourselves (1). MDF (Mouth Dissolving Film) by pass the hepatic first pass metabolism so there is no or less chance of drug degradation and increase the bioavailability of the drug, the drug incorporated in MDF is used in less amount therefore it reduces the side-effects. This dosage form is the best option for the diseases which requires quick on-set of action like: high blood pressure, cardiac problems, allergic condition, shortness of breath, nausea, epilepsy, for comatose patients, accidental patients and in various disease or conditions in which patients are unable to engulf the tablets or pills or any other dosage forms(2). MDF are the dosage form which get adhere to the surface of oral mucosal layer and delivering the drug through polymeric layer achieved a greater success in the field of pharmaceutical science. When the films are placed on tongue it releases the active pharmaceutical ingredients as soon as it gets hydrated by saliva. First MDF was Listerine and Pfizer was the first company who manufactured it for mouth freshening purpose(3).

ABSTRACT

Objective: This study aimed to formulate and optimize a Tablet-in-Capsule containing sodium bicarbonate and pantoprazole sodium using response surface methodology to optimize pantoprazole sodium mini-tablets.

Methods: Mini-tablets were prepared via the direct compression method, utilizing Croscarmellose sodium as a disintegrating agent, Microcrystalline cellulose as a binder, Mannitol & Dicalcium Phosphate as fillers. Magnesium stearate was used as a glidant and talc as a lubricant.

Results: The sodium bicarbonate dose was determined via Digital pH meter measurements for one hour. Mini-tablet formulation aimed for a disintegration time of 5.5 minutes. Subsequently, a desirability plot yielded a D value of 0.995. The optimized formulation was evaluated for thickness (3.65±0.10mm), weight variation (195.71±4.8 mg), hardness (6.9±0.70 kg/cm²), friability (0.51±0.02%), disintegration (5.5±0.15 min), and dissolution (99.11±0.15%).

Conclusion: A formulation containing sodium bicarbonate (400mg) and pantoprazole sodium mini-tablets with concentrations of pantoprazole sodium (40mg) Croscarmellose sodium (8mg), Dicalcium Phosphate (25mg), Microcrystalline cellulose (23mg), Mannitol (98mg) talc (2mg) magnesium stearate (4mg) with a total tablet weight of 200 mg, met the prerequisites of optimum formulation. This combination yielded a disintegration time of 5.5 minutes and 99.11% drug release in 50 minutes, aligning with the optimized result.

ABSTRACT:

Introduction: The Aim of present research work was to formulate and characterize Sustained release Multichambered Tablet Using Fused Deposition Modelling (FDM) 3D-Printer, the drug candidate used in this project was Losartan Potassium, is an Angiotensin receptor Type-II blocker.

Objectives: By altering the shell thickness and infill density %, sustained release action of tablet using API Losartan Potassium had been achieved.

Methods: The Novel method had been used for fabricating Tablet called "Pause and fill Method". Tablets was prepared using FDM 3D-printer with three different batches (FI, FII and FIII) by creating variation in infill-density and inner wall thickness: 0.5mm, 1mm and 1.5 mm respectively using poly vinyl alcohol (PVA) filament. As half-life of Losartan is 1.5-2hrs (Indian Pharmacopoeia, 2018) with poor bioavailability, sustained release tablet enhanced the bioavailability of the drug, the *in-vitro* drug release from the tablet drug is extended upto 270mins (approx).

Results: From the Results it concluded that the FIII batch of tablet is the optimized batch with drug release about 99.23 % for 270 mins, whereas FII shows 98.69 % for 240 mins and FI shows 97.71% for 210 mins. The data when used to evaluate the kinetic studies, states that the coefficient 'r' indicated the drug release from the tablet which was followed by zero order release kinetics.

Conclusions: The work conclude that the FDM 3D printing process was capable for producing rapid and sustained release tablets on the basis of different thickness. This work also helps to decrease the side effects of drugs by providing sustained release of drugs & increase the safety and efficacy and avoid incompatible between APIs by developing drug release characteristics. The printer software enabled easy fabrication of oral drug delivery devices with different wall or chamber thickness.

1. Introduction

Novel Drug delivery systems are the techniques which are day by day getting more developed and more accurate for delivering of therapeutic doses, which are tailored according to the patient need or requirement. Additive manufacturing technology includes various types of 3D-printing methods are as follows: Stereolithography (SLA), selective laser sintering (SLS), inkjet-based 3D-

printing and Fused deposition modelling (FDM). Such novel methods can be used in choosing the doses i.e. flexibility in selection of amount of drug or API, shape and size of the dosage, etc.¹⁻³ A Rapid proto-typing technology, due to its cheapest printing costs, high printing quality, and well capacity to employ drug-loaded filaments via hot-melt extrusion (HME), Fused deposition modelling (FDM) is one of the additive

Superporous hydrogel are developed initially as novel drug delivery system to retain dosage form in upper gastrointestinal tract, and absorb drug in gastric medium. The generation-based classification of superporous hydrogel is covered in this review. The hydrophilic polymer networks formed by the molecular entanglements which absorb water up to thousands of times to their dry weight. These systems swells quickly and resist in an extremely acidic condition in stomach. This hydrogel is instantly swell through capillary force which is driven by absorption of water through an open porous structure. This system provides better solubility and bioavailability by targeting the specific site of absorption. The conventional superporous hydrogels have the poor mechanical strength which is overcome by developing the second superporous hydrogel generation composites and the third-generation superporous hydrogel hybrids. This article has mainly focused on the classification, techniques, drug loading, research papers, characterizations and applications of superporous hydrogel.

Keywords: Gastric retention, Cross-linking, Superporous hydrogel, Swelling rate, Elastic property, Hydrophilic polymer networks.

Introduction

Oral administration is most convenient and simple route for drug delivery to the systematic circulation and has also preferred due to numerous advantages such as easy administration, formulation flexibility, cost-effectiveness, ease of storage and transportation, high patient compliance. The oral drug delivery is based on various elements such as stomach emptying, gastrointestinal (GI) transit duration of dosage forms, drug release from the dosage form and drug absorption site.^{1,2} The advantageous property of gastro-retentive drug delivery system (GRDDS) is to retain in the upper part of gastrointestinal tract (GIT) for prolong period of time and thereby it is significantly longer the gastric retention time (GRT) of the drugs.³ The drug is taken by keeping the dosage form in the acidic medium of stomach, and then it is released in controlled manner into the stomach, duodenum, or intestine at a designated location.⁴

The hydrophilic polymer networks are known as hydrogels which absorb water up to thousands of times to their dry weight. Hydrogels are chemically stable or they can degrade, disintegrate, and dissolve. When the hydrogel networks are bonded by molecular entanglements and other forces such as hydrogen bonding, ionic bonding, or hydrophobic forces, they are referred to as reversible or physical gels.⁵

Superporous hydrogel

Superporous hydrogel (SPH) is a three-dimensional network of hydrophilic polymer which absorbs an enormous volume of water in a less period of time due to the presence of highly bounded interconnected microscopic pores.⁶ The superporous hydrogels have pore size ranges from 50 to 100 µm and swell to greater size in less than a minute due to quick intake of water via capillary action through a network of closely interconnected microscopic open pores. SPHs have ability to swell to a larger size and have a mechanical strength sufficient to sustain pressure from gastric contraction, this is accomplished by including the hydrophilic material such as Ac-Di-Sol (Cross Carmellose Sodium).⁶

This is a new kind of hydrogel which has multiple superize pores throughout them and swelling occurs by the capillary wetting process rather than the diffusion process. The preparation of SPH needs certain ingredients are used to mix such as initiators, cross linkers, foam stabilizers, foaming agents, foaming aids, and monomer in diluted water.⁷

The SPH have extremely quick swelling kinetics and high swelling rate but the mechanical force was too low. Due to their poor mechanical properties, the numerous swollen SPH were difficult to handle and broken easily. Generally, the mechanically strong super porous hydrogel can be created by increasing the cross-linking density, but doing so would cause very little swelling and lose the superabsorbent quality.

ABSTRACT

The aim of the present research work was to prepared superporous hydrogel (SPH) tablet containing Losartan potassium which is used to treat hypertension. The gastroretentive dosage form of SPH using Losartan potassium which is an angiotensin II receptor antagonist as a model drug for prolonged drug release in acidic condition. Losartan potassium has short half-life about 1.5 to 2h and less bioavailability (33%), mainly absorbed from proximal part of small intestine. The gas blowing method was used to prepare the superporous hydrogel by involving interpenetrating polymer network. Chitosan, HPMC K100M, Polyvinyl alcohol and glyoxal was used to prepare the SPH formulations. All the formulations were evaluated by swelling time, swelling ratio, porosity. The amount of polymer increased there was an increase in swelling properties. Swelling time was gradually decrease from 20 to 12 mins. The swelling ratio was enhanced by increase in the concentration of polymer. The SPH formulation of F1 to F8 were developed and the dried SPH powder was prepared. The (F8) formulation showed good pre-compressional and post-compressional parameters. The SEM study was clearly revealed the presence of the pores on the interior surface of the superporous hydrogel. The drug release of the best formulation (F8) showed highest drug release up to 8 h with 97.61%. The drug release kinetics of formulation (F8) followed zero-order kinetics model and the correlation coefficient (R² value is 0.9976 with non-fickian diffusion type of mechanism.

Darshana P, Nadeem A. F, Darshan J, Nimita M Preparation, Characterization and Evaluation of Superporous Hydrogel Tablet as a Gastroretentive Drug Delivery System of Losartan Potassium. Adv. Biores. Vol 15 (4) July 2024. 79-88

INTRODUCTION

Oral sustainable drug delivery systems are mainly employed to improve the bioavailability of basic drugs with short elimination half-life. The drug has limited solubility at higher pH levels administered by this system. The major problem with the oral formulations is the inability to increase their retention time in the stomach and proximal part of small intestine. There are many approaches have been developed which include: the floating system, the swellable and expandable system, or the superporous hydrogel, the high-density system, the mucoadhesive system, the magnetic system. (1)

Hydrogels are the crosslinked polymers which expand in the presence of water while maintaining their shape. According to some researchers it is a swollen polymeric material retaining a significant amount of water in it but without itself being dissolved in water. Hydrogels can be created by polymerization of hydrophilic monomers in the presence of crosslinker. The application of hydrogel in the medical field and specifically in controlled drug delivery system. (2)

The superporous hydrogel is highly bounded microscopic pores of hydrophilic polymer. It absorbs large amount of water in less period of time due to presence of three-dimensional network. (3) SPHs have the ability to quickly swells to a larger size in minutes due to rapid uptake of water through the capillary action. It has sufficient swelling property and mechanical strength to resist pressure from the gastric contraction. For the preparation of SPHs certain excipients also used like, initiators, crosslinkers, foam stabilizers, foaming agents are added into aqueous monomer solution. (4), (5)

Abstract: One of the businesses with the most regulations is the pharmaceutical industry. Implementing a quality management system helps the pharmaceutical business deliver high-caliber finished goods to the market. Quality management system has played an important role in producing a high quality of produced yield as well as it is more supportive in managing, balancing and continuing the quality status in their services or products. This review article goes into detail about the ICH Q10, their purpose, history, GLP and ISO. This review article also covers audits, QMS, their implementation, risk management, certification and industrial influence on standards and quality. This review article in short covers all the important and valuable aspects of QMS from how is QMS implemented and what are its effects on industrialization and its audit and certification.

Keywords - Quality management, ICH Q10, QMS, GLP, CIP, Pharmaceutical industry.

I. INTRODUCTION

The context of quality has become significant in the current situation. In general, "quality" refers to a factor that determines whether a good or service is superior or poor. Comprehending the extent to which a product fulfills its criteria is a gauge of quality. Since pharmaceutical products are directly injected into the bodies of its consumers, identity, purity, safety, and finally the right product quality are vitally important. This makes quality control in the pharmaceutical industry a crucial topic. Every pharmaceutical sector is required to adhere to a number of global guidelines that have established norms or criteria.

A formalized system that records duties, processes, and procedures for accomplishing quality policies and objectives is known as a quality management system, or QMS. A QMS aids in organizing and directing an organization's operations to satisfy legal and customer requirements and continuously enhance its efficiency and efficiency. [2]

II. QUALITY IN PHARMACEUTICAL INDUSTRY

Since Quality directly affects the revenues from sales, quality is a crucial necessity for items in any business. There is, nevertheless, one more significant reason why high-quality products are required in the pharmaceutical sector. This is really one of the main causes of this industry's extreme regulation, as any mistakes made during the production process could have harmful or even lethal effects on the patients who consume the products. Pharmaceutical items must therefore be produced in a way that satisfies strict regulatory requirements. [3]

Quality cannot be adequately described in one word. Each individuality can define it in their own unique way. The satisfaction is the sole factor that unites them all. The product must fulfill the manufacturer's requirements. Consequently, a product's ability to fulfill requirements is a measure of its quality. Since pharmaceutical items are intended for human use, quality should not be compromised. Thus, the product's identification, safety, chastity, and quality are required. Vibrant recommendations recommend that each pharmaceutical association adhere to certain standards and regulations. The highest quality position is guaranteed with fewer recall or unfavorable occurrences when the fundamentals of the quality operation system are used. [4]

ABSTRACT

Under the more general statutory CGMP provisions of section 501(a)(2)(B) of the Federal Food, Drug and Cosmetic Act, validation of manufacturing processes is deemed a legal part of current good manufacturing practice for active pharmaceutical ingredients (APIs). Validation of manufacturing processes is required by the Current Good Manufacturing Practice (CGMP) regulations for finished pharmaceuticals (21 CFR 211.100 and 211.110). A medication should be created that is suitable for its intended purpose, according to the fundamental tenet of quality assurance. Procedure Validation is the collection and estimation of data that proves a process can reliably produce high-quality goods, starting with process design and continuing through commercial production. Three stages of validation are suggested by the 2011 USFDA process validation guideline - Process design, Process qualification, Continued Process qualification. An introduction and broad review of process validation in the pharmaceutical manufacturing process, specifically in the tablet manufacturing process, are provided in this article. Process validation ensures that a process will consistently create a product that meets its predefined quality features and qualities. It is a crucial step in the design, prototyping, and manufacturing processes. Since quality is always a necessary precondition for any product, pharmaceuticals must be produced to the greatest standards of quality. Furthermore, end-product testing does not ensure the product's quality on its own; rather, quality assurance methods need to be applied to incorporate the product's quality throughout the whole process, rather than only testing it at the conclusion.

(57) Abstract:
The present invention provides a polyherbal formulation. The polyherbal formulation, comprising of Saccharum officinarum L; Curcuma; Syzygium aromaticum; Trachyspermum amsum; Piper nigrum; Zingiber officinale; Glycyrrhiza glabra; Mentha; and pharmaceutically acceptable excipients, wherein the weight of Saccharum officinarum L 25%, Curcuma 15%, Syzygium aromaticum 6.25%, Trachyspermum amsum 6.25%, Piper nigrum 7.5%, Zingiber officinale 7.5%, Glycyrrhiza glabra 12.5%, Mentha 1.25%, Vasaka leaves 6.25% and pharmaceutically acceptable excipients 10.00%. The polyherbal formulation, wherein the formulation is in the form of an effervescent tablet. The polyherbal formulation, wherein the formulation is used as an anti-tussive agent. The polyherbal formulation, wherein the formulation is herbal alternative to cure cough relief, sore throat, and dryness. The polyherbal formulation has their usefulness as potential anti-tussive agent.

(57) Abstract :
 The aim of this invention was to examine a novel fused deposition model (FDM) 3D printing method to fabricate gastroretentive floating tablet case with micro-porous compressed tablet. A zero-inhalation class drug metformin maleate, was also used as a model drug to examine, and was successfully incorporated into floating tablet case made up of natural polyvinyl alcohol (PVA). However, the tablet was designed by AutoCAD followed by slicing using Cura Ultimaker 4.4 software. The floating tablet case consists of body and cap as separate composite and surface was designed on the bottom of the body of tablet case. The formulation conditions for preparation of 3D floating tablet case were optimized by adjusting different variables. Three different batches were optimized on the basis of tablet size. These 3D printed tablet case were evaluated for weight variation, friability, hardness, in vitro floating time, and in vitro dissolution studies. All results were within acceptable range. We found that the 0.5 mm orifice case was floated on 0.1 N HCL media surface for more than 325 min and showed the zero-order drug release. Thus, this work demonstrates the feasibility of FDM 3D printing technology as a novel platform for gastroretentive floating tablet, to provide a realistic and personalized medicine.
